WORK EXPERIENCE

Software Engineer (Front-end Developer)

Invoke Solutions Sdn. Bhd. | Jun 2020 - Present

As a software Engineer, I was assigned to develop both adnexio web app and mobile app (PRO, GIG and EDU version) using SCRUM method. Adnexio is a platform for job matching that use AI algorithm. I was assigned to develop high-quality applications using React JS and React Native framework.

My main task includes :

- Mentor and lead a group of new front end engineers to develop ad new HRMS platform.
- Participate in the software development process including design, development, testing and implementation.
- Work closely with SCRUM Team members to develop software solutions with an accurate time estimation.
- Perform user acceptance test with multiple users to access the quality of the web app and mobile app.
- Ensure quality software enhancement in terms of functionalities, reliability, performance, security, and ease of maintenance.
- Discover and fix bugs.

Apart from Adnexio, I was assigned to do client project as such as FoodCaravan and Frank Knight. My main task includes :

- Design and develop static web application to support company operation and business growth.
- Communicate with various departments to understand client requirements.

AWARDS RECEIVED

Talisman Malaysia Limited
Scholarship 2010
